

# Grouped Summaries

SLU DSS 7: Data Wrangling in R  
March 6, 2019

Find Seminar Resources at:  
<https://github.com/slu-dss>

The repository for this week is called [wrangling-04](#). To get started, head to the url above, find the repository, and open it. Scroll down the page to the README file, and use the package installation code if you weren't here last time or are at a new computer. Everyone should use the second code snippet to access today's materials. When you execute the second code chunk, have the data moved to your Desktop and feel free to delete the .zip file (it will ask if you want to do these things). Let us know if you need a hand!

The first code chunk in the notebook will need to be run by everyone once as well!

## Agenda for Seminar 04:

- Some new data!
- Basics of Grouped Summaries
- Window Functions
- Adding Additional Functions
- More Complex Summaries

**Extra resources:** We'll post links to some extra resources for getting started with functions in the [README.md](#) file in this week's repository.
